Streamlining IT Procurement: Automating Standard Laptop Orders with IT Procurement

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes when requesting a standard laptop through IT procurement.

It helps the team better understand the employees and IT procurement staff who face delays and manual effort in the laptop ordering process.
Creating an effective solution for automating standard laptop orders requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the employee's perspective along with his or her goals and challenges.

Example:
