Project Design Phase
Proposed Solution Template

Date	28 September 2026
Team ID	SWTID-2026-1286
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with IT Procurement
Maximum Marks	2 Marks

Proposed Solution Template:

The project team has filled in the following information in the proposed solution template for the IT procurement automation project.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees currently raise laptop requests manually through emails and paper forms, which are slow, hard to track, and often get delayed at the approval and purchase order stages.
2.	Idea / Solution description	A web-based IT procurement portal where employees can browse an approved laptop catalog, raise requests, get automatic manager approval routing and budget validation, and have purchase orders generated automatically for the vendor, with real-time tracking until delivery.
3.	Novelty / Uniqueness	Combines catalog browsing, approval workflow, automatic budget validation and purchase order generation into a single self-service portal, instead of separate manual emails and spreadsheets.
4.	Social Impact / Customer Satisfaction	Reduces employee waiting time for a working laptop, gives managers and finance clear visibility into requests and spend, and reduces repetitive manual work for the procurement and IT teams.
5.	Business Model (Revenue Model)	Internal cost-saving tool for the organisation: reduces procurement turnaround time and manual effort, which can also be offered as a licensed SaaS solution to other companies for a subscription fee.
6.	Scalability of the Solution	Can be extended to other IT assets (monitors, peripherals, software licenses) and rolled out to additional departments or locations without major changes to the workflow.
