Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-1286
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	3 Marks
College	Balagan Saraswathi Arts and Science College For Women (MSU144)
Team Leader	P Ameena Absana
Team Members	Sakthi Subiksha B, Udhaya Shofana, Sahaya Pradeeba J

Scalability & Future Plan:

This document outlines how the laptop order automation built with Flow Designer can be scaled to handle more employees, higher request volumes, and additional hardware and service types. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Only standard laptop models are supported; custom or high-spec requests are not automated.	Non-standard requests still need manual handling by the procurement team.	Medium
2	Vendor ordering is not integrated; procurement team places the order manually after approval.	Delays in delivery and possible data entry errors.	High
3	Single-level manager approval with no budget or stock checks.	Requests may be approved without validating budget or available inventory.	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Handles requests from a limited group of employees within one organization.	Use role-based catalog visibility and ServiceNow instance scaling to support all departments and locations.
2	Data Storage	Requests, approvals and tasks stored in standard ServiceNow tables.	Archive closed requests periodically and link laptop orders to Asset and CMDB records for lifecycle tracking.
3	Performance	Single flow runs each request sequentially with basic logging.	Modularize logic into reusable subflows and actions; monitor executions in Flow Designer to optimize speed.
4	Security	Basic role-based access and manager approval.	Enforce ACLs, approval audit history, data encryption and least-privilege roles for catalog and flow access.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Vendor/supplier integration through REST API (IntegrationHub) for automatic purchase order creation.	Q4 2026	Removes manual ordering; faster procurement turnaround.
Phase 3	Budget and inventory checks, multi-level approvals, and extension to monitors, phones and accessories.	Q1 2027	Better cost control and wider automation coverage.
Phase 4	Employee self-service portal with real-time order tracking, dashboards and Virtual Agent support.	Q2 2027	Improved user experience and data-driven procurement decisions.
